DETAILED ACTION

1. This Office action is in response to Application No. 09/659,551, filed on 09/11/2000.
2. Claims 1-24 are presented for examination.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined

Art Unit: 3621

was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-7 and 9-24 are rejected under 35 U.S.C. 102 (e) as being anticipated by Matsumoto et al. (U.S. Pat. No. 6,320,829).

As per claims 1-4, 10-19 and 22-24 Matsumoto discloses a copy of digital data from a digital recording medium is controlled so as to prevent unauthorized copying. The digital data is transmitted from a transmitter-side to a receiver-side (which is seen to read as Applicant's claimed invention wherein it is stated that a contents rendering control for tailoring of electronic data or a method of controlling contents to be reproduced or distributed are represented);

in advance of reproduction contents from the electronic data or distributing the electronic data, a control information detecting step to detect the control information from the electronic data, and filtering execution step to apply the predetermined filtering to the predetermined parts of the electronic data in accordance with the control information detected (see., col 4, lines 7-26, col 3, lines 35-67, col 16, lines 31-51);

the electronic data is prepared in which control information has been embedded as digital watermarks to specify the application of predetermined filtering to predetermined parts thereof, the contents rendering control (see., col 4, lines 7-26, specifically wherein it is stated that the electronic watermark information judgment device determines one of two copy restriction levels from the electronic

Art Unit: 3621

watermark information, Applicant duly note that the electronic watermark device rendering control of the application information).

As per claims 5-7, 9, 20 and 21 Matsumoto discloses the claimed method wherein the level information is the information about the level of the content user; and the filtering execution step compares the level of the contents user specified by the level information included in the control information and the level of the contents user specified by the information that the contents user has registered and thereby determines whether predetermined filtering specified by the control information is applied to specific parts of the contents (see., col 6, lines 5-60).

Claim Objections

5. Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
